

AT5100P

Product Description

The new AT-5100 series terminals have been redesigned with ease of use in mind. The sloping front design has reduced the overall width by over 25% and improved the viewing angle of the LCD display. This allows the terminals to be mounted lower down than with previous models and has improved accessibility.

The AT-5100P is designed to use as standard HID proximity cards or fobs. Wiegand and Mifare proximity is also available upon specification. This terminal is CE approved and ROHS compliant and is backwards compatible.

Functions

Standard

Optional

Features
